

RADIVIT: No registration required **Compost Activator**

Directions:

Sprinkle lightly over each layer of composting material to activate and accelerate the process. Ensure compost heap is always damp. If too dry, add water; if too wet, add dry materials – even shredded newspaper or egg cartons. Mix compost well every 2 –3 weeks to ensure that micro organisms receive sufficient oxygen. In winter the decomposition process slows down and it is therefore advisable to re-activate in Spring by sprinkling Radivit throughout the heap.
